Subject: RE: Our Meeting
Attachments: VirTLD.doc; SDC Architecture.ppt

I have enclosed 2 documents :

1)VirTLD.doc : virtualization layer top level design . It's quite an "old" document and not 100% aligned with the current implementation but it gives a good overview of the virtualization layer .

2)SDC Architecture.ppt : describes the Vswitch (former name was SDC) SW architecture , including the iSCSI , Management and Virtualization layers .

Hope it fits you needs . Let me know if any additional information is needed .

Thanks,
Ronny

What I need at this stage is a little background on the virtualization process. Any high-level document describing the way you perform virtualization within the data path will be fine.

Thanks,
Michael

Hi Michael ,

Following your meeting with Gadi & Uli , I understood you are missing information regarding a potential patent of "Methods For Virtualization

9/6/2007

In The Data Path" (numbered as SAR005) .

Can you elaborate regarding the topics this patent should cover , as Gadi didn't remember the exact definition ? Any specific information you are looking for ?

Thanks,
Ronny

Subject: RE: Our Meeting

Hi Michael ,

It was a pleasure meeting you .

9/6/2007

Enclosed please find documents for the following features :

- Snapshot
- Transparent Target
- Journaling
- Fail Over (High Availability) (MultiSDC.ppt)

The Snapshot/Journaling/Transparent Target documents are drafts and introduce the overall feature as we didn't start the implementation yet. The Fail Over document describes the fail over as it implemented today and not the extensions we discussed through the meeting .

Hope it will give you some more information regarding the features we discussed yesterday .

Thanks,
Ronny

The Fail Over will be send in another Email (6MB)

Subject: Our Meeting

Hi Ronny,

It was a pleasure meeting you earlier today and thanks for your time. I'd like to kindly request you to send me the documents relevant to the inventions we've discussed.

Thanks,

Michael Ben-Shimon
